Professional Summary

Information Science and Engineering student with hands-on experience in AI/ML development. Built several projects involving LLM-based systems, RAG implementations, and machine learning pipelines. Comfortable working with Python, modern ML frameworks, vector databases, and backend technologies. Have worked on multi-agent systems, real-time prediction models, and IoT integration. Active in hackathons and technical competitions. Looking for AI/ML internship to gain practical industry experience and develop technical skills further.

Education

B.E. – Information Science Engineering

Dayananda Sagar College of Engineering (DSCE), Bengaluru

2024 – 2028

CGPA: 9.7/10.0

Technical Skills

Programming: Python, JavaScript, TypeScript, C, C++**AI/ML:** XGBoost, LSTM, YOLOv8, Scikit-learn, Pandas, NumPy, SciPy**LLM Systems:** Multi-Agent Architectures, RAG, Prompt Engineering, Vector Search, OpenRouter, Groq API**Backend:** Node.js, FastAPI, FLASK, REST APIs, Socket.io, JWT Authentication, Circuit Breaker Pattern**Databases:** MongoDB (Atlas Vector Search), Firebase, SQL**Engineering Concepts:** Time-Series Analysis, Statistical Testing, Real-Time Processing, Resilience Design

Projects

PromptPilot – Deterministic Multi-Agent AI UI Generator[Live](#) — [GitHub](#)

Designed a structured 4-agent LLM pipeline (Planner → Generator → Validator → Explainer) separating reasoning from deterministic execution to ensure safe and reproducible UI generation. Implemented strict component validation, JWT authentication, MongoDB session versioning, structural diffs, and model fallback strategies.

Indian Chess Academy – RAG-Based Role-Aware AI Assistant[Live](#) — [GitHub](#)

Built full-stack AI platform using Next.js and MongoDB Atlas Vector Search to implement retrieval-augmented generation grounded in structured platform data. Designed RBAC (Student/Coach/Admin), integrated Razorpay payments, and developed operational dashboards.

Phoenix – Resilient AI Call Agent System[Live](#) — [GitHub](#)

Engineered backend resilience architecture incorporating circuit breakers, retry policies, and automated health monitoring. Integrated Groq LLM and ElevenLabs TTS with real-time dashboard and multi-channel alerting for reliable AI call processing.

SentimentAlpha – Trader Behavior Intelligence Engine[GitHub](#)

Performed regime-based time-series analysis correlating trader performance with Bitcoin Fear and Greed sentiment data. Engineered risk metrics and applied statistical hypothesis testing (SciPy) to derive structured trading insights.

AntarAtmaa (GANI) – AI Rockfall Prediction System[Live](#) — [GitHub](#)

Developed predictive ML pipeline combining XGBoost, LSTM, and YOLOv8 using environmental and IoT sensor data. Integrated ESP32-based real-time streams with automated alert generation and dashboard-based hazard visualization.

Achievements

Selected at Smart India Hackathon (College Level). Participated in 12+ hackathons nationwide. Secured Top 3 in a hardware-focused innovation challenge and achieved multiple Top 5 and Top 10 placements across technical competitions.

Additional Information

Core Competencies: Problem Solving, Analytical Thinking, Leadership, Communication, Adaptability**Languages:** English (Fluent), Telugu (Native)
